

Visitor Pass Plus

Creating Islands of Safety

Visitor Pass Plus is a visitor badge and access control software package. With this system a school can effectively monitor all visitors entering and exiting the building(s) while holding them accountable. The system will record a visitor's driver license or state identification and produce a temporary visitor badge. If a state issued ID is not available, the visitor information can be manually entered and a photo can be taken and recorded.

The badges will include their photo, name, location, date/time, and a barcode. The barcode is then scanned during entry and exit so that each time can be recorded. This information is kept in a database for history and reporting purposes. There is also an electronic signature pad, that will eliminate the need for a traditional sign-in book.

The visitor can also be checked against the National Sex Offender database to verify they are currently not a registered sex offender. The lookup only requires access to the internet from the visitor pass computer.

In addition, any school with CAASS can lookup student and staff information, verify guardians for specific students, and create reports on the visitor information.

Additional Features:

- Badges can be printed on time expiring passes
- Optional features with CAASS integration including:
 - Student guardian information and reports

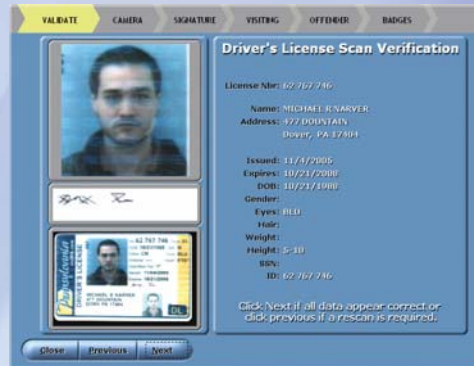

Software Specifications:

To integrate the Visitor Pass Plus with an existing PC the minimum operating requirements are:

Windows XP Pro ▪ 512MB Memory ▪ 5 GB Hard Drive

Various hardware and software packages are available.
